### Professional Summary

Passionate Game & 3D Web Developer experienced in creating games, 3D simulations, and immersive web experiences. Skilled in Unity (C#) and React Three Fiber, with a strong grasp of gameplay design, 3D environments, and performance optimization. Developed FPS-style tactical simulations during military R&D service, focusing on gameplay realism and system accuracy.

Experienced building 3D interfaces and WebXR prototypes with React, Babylon.js, and Node.js, and integrating AI-assisted workflows and shader-based visual effects. Combines technical precision with creative problem-solving to bring interactive ideas to life.

### Technical Skills:

- Game & 3D Development: Unity, C#, Blender, Three.js, React Three Fiber, Babylon.js, WebGL
- Web & Backend: React, Next.js, Node.js, TypeScript, Express, JavaScript, HTML/CSS
- Tools & Systems: MongoDB, Firebase, SQL, Docker, Git, Jira
- Other Expertise: GSAP, GLSL, Hunyuan3D-2 (AI 3D generation)

### Work Experience:

#### Amdocs

##### *3D Full-Stack Developer | Sep 2022 – Aug 2023*

- Worked in the R&D innovation team exploring Metaverse, WebXR, and Generative AI technologies to design next-generation digital service models for telecom clients.
- Designed and developed the frontend for two major prototypes:
  - Universal Wagon – an interactive Metaverse asset built in TypeScript using a custom 3D SDK, capable of recognizing users via identity tokens and adapting its appearance and offerings.
  - 3D Telco Store – a WebXR experience built with React, Babylon.js, and Blender, featuring loyalty tokens, product interactions, and a GenAI-powered avatar assistant using D-ID.
- Led frontend design and implementation, creating interactive 3D environments, UI logic, and real-time animations optimized for browser performance.
- Developed Node.js microservices and REST API endpoints powering token logic, loyalty systems, and GenAI integrations used across both experiences.
- Collaborated with designers and researchers to deliver proof-of-concept demos presented to telecom executives (video showcase available on portfolio site).

#### Battle Lab, IDF

##### *Simulation Engineer (Unity Developer) | Feb 2021 – July 2022*

- Developed FPS-style tactical simulations in Unity (C#) to test new military technologies and weapon systems.
- Built AR/VR-based command simulations integrated with the Meso command-and-control system, supporting tactical decision-making and training.
- Focused on gameplay realism, system accuracy, and data-driven simulation logic for infantry, UAV, and vehicle systems.
- Created C++ desktop applications with MongoDB and SQL Server for simulation data analysis and management.
- Worked in an Agile Scrum environment using Git and Microsoft TFS.

### Selected Project:

#### *Floating Island Portfolio – [itay-levy.vercel.app](https://itay-levy.vercel.app)*

Developed a 3D interactive portfolio using React Three Fiber, Drei, and custom GLSL shaders, featuring an explorable floating island with animated elements and interactive UI. Integrated AI-generated 3D models created with Hunyuan3D-2, refined in Blender, and optimized for WebGL performance.
